

**Amendments to the Specification:**

Please replace the abstract paragraph beginning at page 16, line 1, after the claims with the following:

A wound dressing composition comprising a partially cured polyurethane fluid. The composition can be injected directly into a wound, where it cures to form a wound filling dressing. Also provided is a wound dressing comprising such a composition. Also provided is a kit for the preparation of such wound dressing, the kit comprising (a) a polyurethane prepolymer; and (b) a curing agent for the polyurethane prepolymer. Preferably, the polyurethane components comprise reaction products of the diisocyanate with castor oil or a related ester of ricinoleic acid or its derivatives.
